

Anti-Ly-6k Antibody

Product Details

Available Variants	100 µL (SKU:24391)
Isotype	IgG
Gene Name	LY6K
Host Species	Rabbit
Format	Antigen Affinity Purified
Physical State	Liquid
Buffer	PBS + 0.02% NaN ₃
Applications	WB
Dilution Ranges	WB: 1:500-1:1000 WB Brain: 1:500-1:1000
Species Reactivity	Human
Immunogen	Synthetic peptide corresponding to amino acids from an internal sequence of the human Ly-6k protein
Specificity	Reacts with the 14 kDa human Ly-6K protein
Quality Control	Western blots performed on each lot.
Storage	Recommended that the undiluted antibody be aliquoted into smaller working volumes (10-30 µL/vial depending on usage) upon arrival and stored long term at -20° C or -80° C, while keeping a working aliquot stored at 4° C for short term. Avoid freeze/thaw cycles. Stable for at least 1 year.
UniProt ID	<u>Q17RY6</u>
Country of Origin	United States
Shipping	Blue Ice
Expiration	After date of receipt, stable for at least 1 year at -20°C.

Usage Statement

For research use only. Not intended for therapeutic or diagnostic use. Use of all products is subject to our terms and conditions, which can be viewed on our website.

Product Images

Western blot analysis of Ly-6K protein levels in KK47 human bladder carcinoma cells. The top panel shows Ly-6K protein levels, and the bottom panel shows GAPDH protein levels as a loading control. Lanes are labeled: si-control and Ly-6K. The Ly-6K lane shows a significant reduction in Ly-6K protein levels compared to the si-control lane, while GAPDH levels remain consistent.

Western Blot showing specific immunolabeling of Ly-6K in KK47 human bladder carcinoma cells, LY-6K siRNA, but not scrambled siRNA knocked down Ly-6K expression. A GAPDH antibody was used as a protein loading control. Data courtesy of Masuda et al.

Western blot analysis of Ly6K-GFP protein levels in HEK293T cells. The blot shows protein levels for Ly6K-GFP (top panel) and GAPDH (bottom panel) as a loading control. Lanes are labeled: Ly6K-GFP, HEK293T non-transfected, and HEK293T Ly6K-GFP. The Ly6K-GFP lane shows a strong band for Ly6K-GFP, while the non-transfected lane shows no band. GAPDH levels are consistent across all lanes.

Western Blot of Ly6K protein with GST-tag, non-transfected control HEK293T cells, HEK293T cells transfected with Ly6K-GFP construct showing specific immunolabeling of Ly6K.
