Module "Mod" Mover – Solar Panel Carrying Tool

SKU: PVKSTMM

PRODUCT OVERVIEW

The Module "Mod" Mover is a lightweight, no-mechanical-parts tool designed to assist with lifting and carrying solar panels around the job site. Just hook it onto any framed panel, grab the heavy-duty nylon strap and ergonomic rubber grip handle, and lift. It's also a practical asset for ground-mount installs, where a simple hook-and-pull replaces the need for an installer to manually hold a panel in place. When not in use, it clips to your harness, belt, or work bag via the included carabiner and D-ring.

Key Features

- **Simple Hook Design** – Engages the panel frame instantly; gravity does the rest
- **No Mechanical Parts** – Fast to use with nothing to adjust or maintain
- **Heavy-Duty Nylon Strap** – Supports the weight of a full solar module with ease
- **Ergonomic Rubber Grip Handle** – Reduces hand fatigue during carries
- **Carabiner & D-Ring** – Clips to your harness or belt so it's always within reach

Built for the Job Site

Compatible with any framed solar panel, the Mod Mover reduces the physical toll of repetitive lifting on rooftop and ground-mount installs alike. Proudly made in Boise, Idaho, USA by Solar Tools USA.

SAFETY NOTICE: This tool is designed to assist with carrying solar panels around the job site. It is not designed to hoist panels vertically to another user or to lift panels to heights unreachable on your own. Use outside of these parameters is at the user's own risk.
