

Anti-Nuclei Recombinant Chicken Chimeric mAb BTN Conjugate

Product Details

Available Variants	200 µL (SKU:78-611-BTN)
Conjugate	Biotin
Isotype	IgY
Clone	235-1
Gene Name	Marker for human cells in xenographic research
Host Species	Chicken
Concentration	Lot dependent: provided at 0.3-0.5 mg/mL
Format	Purified by affinity chromatography
Physical State	Liquid
Buffer	1X PBS, 0.05% Sodium Azide pH 7.4
Production Notes	This recombinant antibody is a chimeric antibody created by replacing the mouse heavy and light constant regions of clone 235-1 with chicken IgY heavy and light constant regions. As such this antibody retains the same binding performance as the original clone 235-1 but can be detected using standard anti-chicken secondary antibodies allowing flexibility for multiplexing applications. This antibody is expressed recombinantly in mammalian cells and then affinity purified from the cell culture media.
Applications	ELISA, ICC, IHC
Species Reactivity	Human
Immunogen	Human cell homogenate.
Specificity	Specific for endogenous levels of human nuclear staining pattern. Chromosomes are negatively stained in metaphase cells. With immunoprecipitation, the antibody reacts with a ~80 kDa and ~70 kDa band. The antibody works on acetone fixed and paraformaldehyde fixed cells. It is

suggested that you permeabilize the cells with 0.1-0.4% Triton X100. The antibody also works for immunohistochemistry on paraformaldehyde fixed cryostat sections.

Storage	Aliquot and store at $\leq -20^{\circ}\text{C}$ for long term storage. For short term storage, store at $2-8^{\circ}\text{C}$. For maximum recovery of product, centrifuge the vial prior to removing the cap.
Country of Origin	United States
Shipping	Shipped on ice packs
Expiration	24 months from date of receipt
Usage Statement	These antibodies are to be used as research laboratory reagents and are not for use as diagnostic or therapeutic reagents in humans.
